0→1 launches - market entry - product growth - web-to-app - CAC/LTV and cohorts

PROFILE

Marketing, product and analytics in one person. I have been the person at zero five times, in marketplaces, mobile apps, subscriptions and digital health, most recently building Flowwow's flower and gift marketplace in Brazil from zero to 450+ partner stores, 17 states and hundreds of orders a day. The job underneath all of it is translation: from users, to what gets built, to numbers the business can act on. No single source gets the last word. I check what users say against what they do in the analytics and against the market, and when the data is never going to arrive, I still make the call.

CORE STRENGTHS

Growth: 0→1 launches · market entry and GTM · international expansion · positioning and messaging · category strategy

Product: activation and onboarding · funnel and CRO · lifecycle and retention · monetization and pricing experiments · user research

Analytics: unit economics, CAC/LTV and payback · cohort analysis · A/B testing · attribution and web-to-app measurement

PROFESSIONAL EXPERIENCE

Independent | Growth consulting and interpreting

Jan 2026 - present | Porto

Looking for the next full-time role: one product I would commit to for at least two to three years. The right match takes time, so meanwhile I consult and interpret.

- Launch and growth consulting for early-stage companies: pre-launch growth plans and post-launch audits covering positioning, measurement and unit economics.
- Interpreting between Russian and Portuguese at notarial signings.

Head of Marketing | Flowwow Brasil

Jun 2023 - Dec 2025 | Remote from Porto

Global marketplace for flowers and gifts in 40+ countries. I joined two weeks after the technical launch in Brazil, with no users, and built the market from there, remotely from Porto, with colleagues across eight time zones from Brazil to Bali.

- Owned Brazil end to end: GTM, positioning, category strategy, acquisition and partner supply. Reported to the Flowwow Brasil CEO, then directly to the global board (COO, CFO, CPO).
- Found that the delivery-date filter did not hold through to checkout: users picked a date and a gift, then learned at checkout that the shop could not deliver. The fix lifted in-app revenue by about 40%, on a channel worth about 17% of total revenue.
- Recruited research participants who had bought flowers online in the previous six months and built positioning and creative from the words of the heaviest buyers. In a market with high scam perception, the product had to sound Brazilian, not translated.
- Tested new categories, including plants, balloons, bento cakes and gift baskets (cestas de presentes). Cut the ones that did not hold and scaled the one that did: gift baskets grew to about 40% of GMV.
- Tested Meta AEM against SKAdNetwork on the web-to-app funnel and ran mostly AEM, which performed better at our volume. Cross-checked the modelled app data against the deterministic web data.
- Managed 3-4 direct reports and three agencies, and directed the work of about ten people from the global SEO, analytics and design teams who did not report to me. Scaled spend 10× within days for peak seasons, inside one market and on the same audience.

9× revenue growth in 2024 - 3× revenue growth in 2025 vs 2024 - 17 Brazilian states - 450+ partner stores

Chief Marketing Officer | Ornament Health

Feb 2020 - Aug 2022 | Remote

Consumer health app for tracking lab results. Joined after a technical launch that had no users. Fully remote team across Montenegro, Switzerland, Germany, Austria and Russia, plus freelancers in Mexico, Brazil and the US.

- Built the marketing and growth function from scratch. Ran paid acquisition myself for about a year before the first hire, then built a team of seven plus four agencies, with budgets up to EUR 300K a month across markets. Tested the US and put the money into Latin America, where the unit economics could get to profitable; the US was more saturated, more expensive and more regulated for a health product.
- Found the first audiences by interviewing the heaviest users, each defined by the workaround they already spent time on: pregnant women with folders of printed lab results, biohackers with their own spreadsheets. When those audiences ran out, I switched to non-users and drop-offs, and that switch produced the repositioning to mainstream wellbeing.
- When Apple's tracking rules changed, worked with product on the tracking opt-in onboarding screen and kept improving it. Our opt-in rate grew, and it showed that Meta's side of the consent set the limit on what we could see.

- Measured campaigns three ways: the ad platform, server-side conversion events and our own database, so no single number stood in for the whole.
- Owned monetization and activation: pricing experiments, subscription rollout across markets, activation moments (lab-results upload, quiz completion) and lifecycle push built on behaviour.

2M+ installs - 150K MAU at peak - after repositioning, 5× the users on the same budget and 4× lower CPA

Head of User Acquisition | DocDoc

Jul 2017 - Feb 2020 | Moscow

Largest medtech platform in Russia: doctor search, booking, clinics and telemedicine.

- Moved growth decisions from short-term order counts to cohort, LTV and payback logic. Found that app users carried much higher long-term value than web users and built the web-to-app funnel until the app was a real growth channel.
- Caught my own model error: the cohort model predicted user behaviour correctly but not the cash, because under the clinic agreements a user's first six months earned almost nothing. Corrected the model, reset expectations and renegotiated terms with some clinics.
- Ran brand campaigns with no install link to measure demand the ad platforms did not report. A large share of installs came from people who never clicked and searched for the app by name, checked against our own booking records. This was years before Apple's tracking changes made that kind of measurement standard.
- Built lifecycle and push programmes, including an abandoned-search trigger tested against a held-out control group. Rolled winning tests out to the full audience, which grew repeat orders and cross-sales into other products such as telemedicine.
- Worked both sides of the marketplace, patients and clinics, and the launch of telemedicine, a category with almost no demand and a real need underneath.

+40% in orders from the web-to-app journey - +20% in revenue after clinic terms were renegotiated

Earlier | Anews, Grape International, RBS Corporation

2009 - 2017 | Moscow

- Anews (news aggregator backed by TMT Investments): joined before launch and ran app marketing, ASO and paid acquisition. Launched in the US as a short test, then prioritised Latin America on unit economics. Worked with colleagues in the San Francisco and São Paulo offices; spoke at industry conferences.
- Grape International: hired as the single marketer to launch two messengers, Grape and then Ping, both for the US market. Coverage in TNW; the first Facebook mobile ad campaigns.
- RBS Corporation (digital agency): my one fully B2B role, marketing the agency's services and SaaS tools such as Webvisor. Started in PR as press secretary, writing articles, client case studies and speeches.

4M+ installs across paid and organic channels

SKILLS AND TOOLS

Acquisition: Meta · Google Ads · Apple Search Ads · TikTok · Pinterest · ASO · SEO · PR · influencer · web-to-app

Measurement and lifecycle: Adjust · AppsFlyer · Firebase · GA4 · RevenueCat · Branch · OneSignal · SKAdNetwork · Meta AEM · server-side events · email/CRM · push

Product and AI: Jira · Confluence · Figma · Miro · Apptweak · AppFollow · BigQuery and SQL (simple queries for years, far more complex work now with AI) · AI for research and analysis · Cursor

Speaking: ASO Academy lecture on app localisation for LATAM · i-COM 2016 · Mobile Marketing Conference 2015

LANGUAGES AND EDUCATION

Languages: English (first language of my translation degree; my working language since I started) · Portuguese (C1, DAPLE certified; worked in it daily) · Russian (native) · Spanish (second language of the same degree; interviewed and hired in it)

Education: Moscow Aviation Institute · Master's, Economics & Management (specialisation in entrepreneurship) · Master's, Linguistics & Translation (English, Spanish)
